Lee has  $\frac{4}{5}$  of a chocolate bar left.

4 people share it equally.

What fraction of the chocolate bar do they each get?

$$\frac{4}{5} \div 4 = \frac{1}{5}$$

Tell a chocolate bar story and ask a question for each of these:

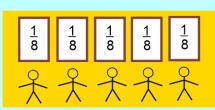

$$\frac{3}{4} \div 3 = \frac{1}{4}$$
  $\frac{5}{7} \div 5 = \frac{1}{7}$ 

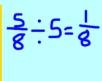

$$\frac{5}{7} \div 5 = \frac{1}{7}$$

$$\frac{2}{3} \div 2 = \frac{1}{3}$$

Write a number sentence to match these divisions.

$$\frac{1}{5} \quad \frac{1}{5} \quad \frac{2}{5} \div 1 = \frac{1}{5}$$

$$\frac{3}{7} \div 3 = \frac{7}{7}$$
