

LO: Mixed number x whole number

$2\frac{1}{4} \times 1 =$

$2\frac{1}{4} \times 2 =$

$2\frac{1}{4} \times 3 =$

$2\frac{1}{4} \times 4 =$

Simple models

Partition the mixed number  $\rightarrow (2 \times 2) + (\frac{1}{4} \times 2)$        $(2 \times 3) + (\frac{1}{4} \times 3)$        $(2 \times 4) + (\frac{1}{4} \times 4)$

Without brackets would also be correct but they might make the number sentences clearer.

$3\frac{1}{3} \times 1 =$

$3\frac{1}{3} \times 2 =$

$3\frac{1}{3} \times 3 =$

$3\frac{1}{3} \times 4 =$

For each calculation - draw a simple model.

- show the **partition** method

$4\frac{2}{3} \times 2 =$

$2\frac{1}{5} \times 5 =$

$3\frac{3}{4} \times 3 =$

$5\frac{1}{6} \times 4 =$

Which multiplication does each model represent?

Make up a 'story' to

match one of the models.
