

1) Complete each calculation.

2) Choose two of the models above and write the number sentences each represents.

1) Which representation is the odd one out and why?

1) Ffion is thinking of an odd number between 420 and 430. If she adds or subtracts an even number of ones but the tens or hundreds do not change, what are the possible calculations Ffion could have created?

David does the same and writes a calculation with an answer of 424. Ffion says that David must have made a mistake. Who is correct? Explain how you know.

2) David has written this part of a calculation. Find three different ways he could complete it.

$$\begin{array}{r}
 53 \square \\
 + \quad \quad 2 \\
 \hline
 53 \square
 \end{array}$$

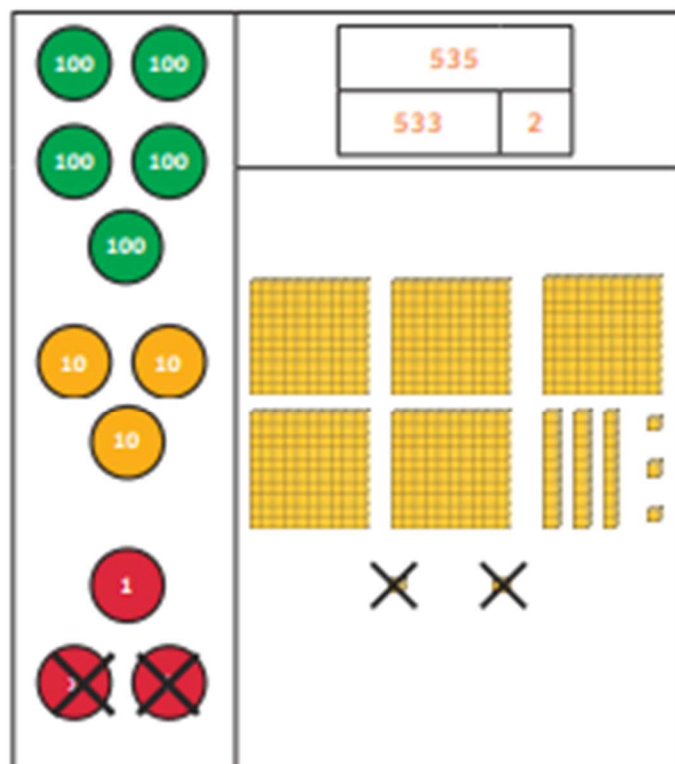

3) Write a missing number column addition or subtraction for a friend to solve where the hundreds and tens do not change.

1) Complete each calculation.

2) Choose two of the models above and write the number sentences each represents.

1) Which representation is the odd one out and why?

1) Ffion is thinking of an odd number between 420 and 430. If she adds or subtracts an even number of ones but the tens or hundreds do not change, what are the possible calculations Ffion could have created?

David does the same and writes a calculation with an answer of 424. Ffion says that David must have made a mistake. Who is correct? Explain how you know.

2) David has written this part of a calculation. Find three different ways he could complete it.

$$\begin{array}{r}
 53\ \square \\
 + \quad \quad 2 \\
 \hline
 53\ \square
 \end{array}$$

3) Write a missing number column addition or subtraction for a friend to solve where the hundreds and tens do not change.

1) Complete each calculation.

2) Choose two of the models above and write the number sentences each represents.

1) Which representation is the odd one out and why?

1) Ffion is thinking of an odd number between 420 and 430. If she adds or subtracts an even number of ones but the tens or hundreds do not change, what are the possible calculations Ffion could have created?

David does the same and writes a calculation with an answer of 424. Ffion says that David must have made a mistake. Who is correct? Explain how you know.

2) David has written this part of a calculation. Find three different ways he could complete it.

$$\begin{array}{r} 53 \square \\ + \quad \quad 2 \\ \hline 53 \square \end{array}$$

3) Write a missing number column addition or subtraction for a friend to solve where the hundreds and tens do not change.

1) Complete each calculation.

2) Choose two of the models above and write the number sentences each represents.

1) Which representation is the odd one out and why?

1) Ffion is thinking of an odd number between 420 and 430. If she adds or subtracts an even number of ones but the tens or hundreds do not change, what are the possible calculations Ffion could have created?

David does the same and writes a calculation with an answer of 424. Ffion says that David must have made a mistake. Who is correct? Explain how you know.

2) David has written this part of a calculation. Find three different ways he could complete it.

$$\begin{array}{r}
 5 \quad 3 \quad \square \\
 + \quad \quad \quad 2 \\
 \hline
 5 \quad 3 \quad \square \\
 \hline
 \end{array}$$

3) Write a missing number column addition or subtraction for a friend to solve where the hundreds and tens do not change.

1) Complete each calculation.

2) Choose two of the models above and write the number sentences each represents.

1) Which representation is the odd one out and why?

2) David has written this part of a calculation. Find three different ways he could complete it.

$$\begin{array}{r}
 53 \square \\
 + \quad \quad 2 \\
 \hline
 53 \square
 \end{array}$$

3) Write a missing number column addition or subtraction for a friend to solve where the hundreds and tens do not change.

1) Complete each calculation.

2) Choose two of the models above and write the number sentences each represents.

1) Which representation is the odd one out and why?

1) Ffion is thinking of an odd number between 420 and 430. If she adds or subtracts an even number of ones but the tens or hundreds do not change, what are the possible calculations Ffion could have created?

David does the same and writes a calculation with an answer of 424. Ffion says that David must have made a mistake. Who is correct? Explain how you know.

2) David has written this part of a calculation. Find three different ways he could complete it.

$$\begin{array}{r}
 53 \square \\
 + \quad \quad 2 \\
 \hline
 53 \square
 \end{array}$$

3) Write a missing number column addition or subtraction for a friend to solve where the hundreds and tens do not change.

1) Complete each calculation.

A large rectangular workspace divided into four vertical columns. The first column contains four hundred blocks stacked vertically. The second column is empty. The third column contains five one blocks stacked vertically. The fourth column is empty. A minus sign is placed between the first and third columns, and an equals sign is placed between the third and fourth columns.

2) Choose two of the models above and write the number sentences each represents.

1) Which representation is the odd one out and why?

Four representations of the number 535 are shown. The first is three hundred blocks (green squares), three ten blocks (orange squares), and five one blocks (red circles). The second is a place value chart:

5	3	5
5	3	2

 The third is three hundred blocks, three ten blocks, and five one blocks. The fourth is a multiplication diagram:

5	3	5
\times	\times	

1) Ffion is thinking of an odd number between 420 and 430. If she adds or subtracts an even number of ones but the tens or hundreds do not change, what are the possible calculations Ffion could have created?
